4 offset-spacers moulded with the VESA Bracket. These can twist off and be added to the Top Cover to gain extra height for use with tall HAT boards. Normal HAT boards like the Sense HAT will fit with the standard Top Cover

The “logo” cover can be removed easily to gain access to the SD Card / Camera PCB.
If you want to prevent easy access, then the Top cover can be screwed into position using normal or security type screws.

— Kensington Lock feature
